

## Patient Demographics

Patient Name: john

Gender: MALE

Age (Months): 6 months (0.5 years)

Assessor: Health Worker Admin

## Screening Risk Assessment

Risk Classification:

**NORMAL**

Overall Score:

**26.9 / 100**

Prediction Confidence: 92.0%

Clinical Weight: 70%

Facial AI Weight: 30%

Risk Indicator Visual Scale: ▼

### Clinical Anthropometric Data

|                            |                         |
|----------------------------|-------------------------|
| Height (cm):               | 45 cm                   |
| Weight (kg):               | 12.4 kg                 |
| BMI (kg/m <sup>2</sup> ):  | 61.23 kg/m <sup>2</sup> |
| MUAC (cm):                 | 13.5 cm                 |
| Weight-for-Height Z-score: | +8.33                   |
| Height-for-Age Z-score:    | -9.04                   |

### Facial AI Morphometrics

|                          |              |
|--------------------------|--------------|
| Cheek Hollowness Index:  | 0.480        |
| Temple Depression Score: | 0.840        |
| Jaw Prominence Ratio:    | 0.700        |
| Cheekbone Prominence:    | 0.833        |
| Facial Symmetry Score:   | 100.0%       |
| Facial Clinical Weight:  | 30% of total |

## Suggested Nutritional Action Plan

|                      |                                                                                                                                                                                        |
|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Recommended Diet:    | Maintain an age-appropriate balanced diet containing core food groups (proteins, carbohydrates, healthy lipids, vitamins). Encourage continued breastfeeding up to 2 years and beyond. |
| Lifestyle Advice:    | Focus on locally sourced vegetables, fresh fruits, whole grains, and clean protein items. Ensure child receives complete standard immunization schedule and vitamin A distributions.   |
| Follow-up Protocols: | Conduct routine weight and stature tracking during standard monthly/quarterly vaccination and pediatric appointments. Re-screen if the caregiver reports lethargy or loss of appetite. |

#### DISCLAIMER & LIMITATION OF LIABILITY:

This application is an AI-assisted screening tool and is NOT a medical diagnosis. The prediction is intended for early screening and triage assistance only. All high-risk cases and borderline results must be evaluated directly by qualified healthcare professionals. Vitora is not liable for clinical decisions made based on this automated screening utility.
